

**News : New Life Organisation has launched Investing in local made recycled 20L bottle hand-washing facility for Poor elderly in Dar es salaam project.**

The Pollination Project Team (TPP) awarded New Life Organisation grant in June, 2020 to implement *Investing in local made recycled 20L bottle hand-washing facility for Poor elderly in Dar es salaam*. The project aims at impacting community to adopt low cost hand-washing facility to control risk of infectious during COVID-19 Pandemic and Post Pandemic. The project is designed to provide solution for poor families particular elders who have been incapable to afford ready-made handwashing facilities such as bucket handwashing facility, foot operated han-washing facility, sensory hand-washing facility, solar-hand-washing facility that are sold in averaging USD 20-50. As a result different actors has been focusing to invest in these technology which majority of poor elders and low income community described as Bottom of Pyramid (BOP) can not afford to buy to that end risk of infection has been threatening this groups. To achieve social and universal inclusion for all community to afford low cost hand-washing facilities and therefore to practise positive hygiene behaviour that accelerates reducing risk of infection during and Post COVID-19 Pandemics. New Life Organisation with support from The Pollination Project Team (TPP) a U.S Based organisation supporting micro grants to organisation working to bring new innovation and bring change to community. Signed a grant to support New Life Organisation to innovate recycled bottle hand - washing facility that is using local available recycled bottle designed with recycled bottle trap to be used by poor elders. New Life Organisation therefore innovated a recycled bottle hand-washing facility which that can be made by any trained person. The project therefore target poor 50 elderly in Dar e salaam, in Chanika, Pugu with six ward area Tanzania. These 50 elders will be trained on how to make recycled hand-washing facility and will act as change makers to adopt the technology and replicate to local community. The project seek to accelerate impact to more than 250 elderly as primary beneficiary and other community as secondary beneficiary. Thanks to **The Pollination Project team (TPP) for support.**
